Arnold Sommerfeld Lectures  
Munich, Jan 15, 2018

# Mathematics & Physics

If you want to be a physicist, you must do three things—first, study mathematics, second, study more mathematics, and third, do the same.

**Arnold Sommerfeld**

*“The Unreasonable Effectiveness of Mathematics  
in the Natural Sciences.”*

— Eugene Wigner (1960)

# Galileo: “The Book of Nature”

Philosophy is written in this grand book — I mean the universe — which stands continually open to our gaze, but it cannot be understood unless one first learns to comprehend the language and interpret the characters in which it is written. It is written in the language of mathematics, and its characters are triangles, circles, and other geometrical figures, without which it is humanly impossible to understand a single word of it; without these, one is wandering around in a dark labyrinth.

***“To those who do not know mathematics it is difficult to get across a real feeling as to the beauty, the deepest beauty, of nature ... If you want to learn about nature, to appreciate nature, it is necessary to understand the language that she speaks in.”***

*Anonymous Mathematician*

# Black Box

**Freeman Dyson**  
(*Gibbs Lecture, 1972*)

*“I am acutely aware of the fact that the marriage between mathematics and physics, which was so enormously fruitful in past centuries, has recently ended in divorce.”*

Each turn  $\rightarrow +$  turn  $\rightarrow +$  is  
 .. .. - .. .. - ie

num LEFT  $\rightarrow i(1-i)(-i)+i$   
 " RIGHT  $\rightarrow (i)(+i)(-i)+i$   
 -----  
 cancels

completely  
 any closed loop cancels

Rule

if a path from A to B  
 is traversed in one direction  $A \rightarrow B$   
 the amp is  $X_{AB}$ . If traversed  
 in other direction  $B \rightarrow A$  it  
 is  $X_{BA} = -X_{AB}$

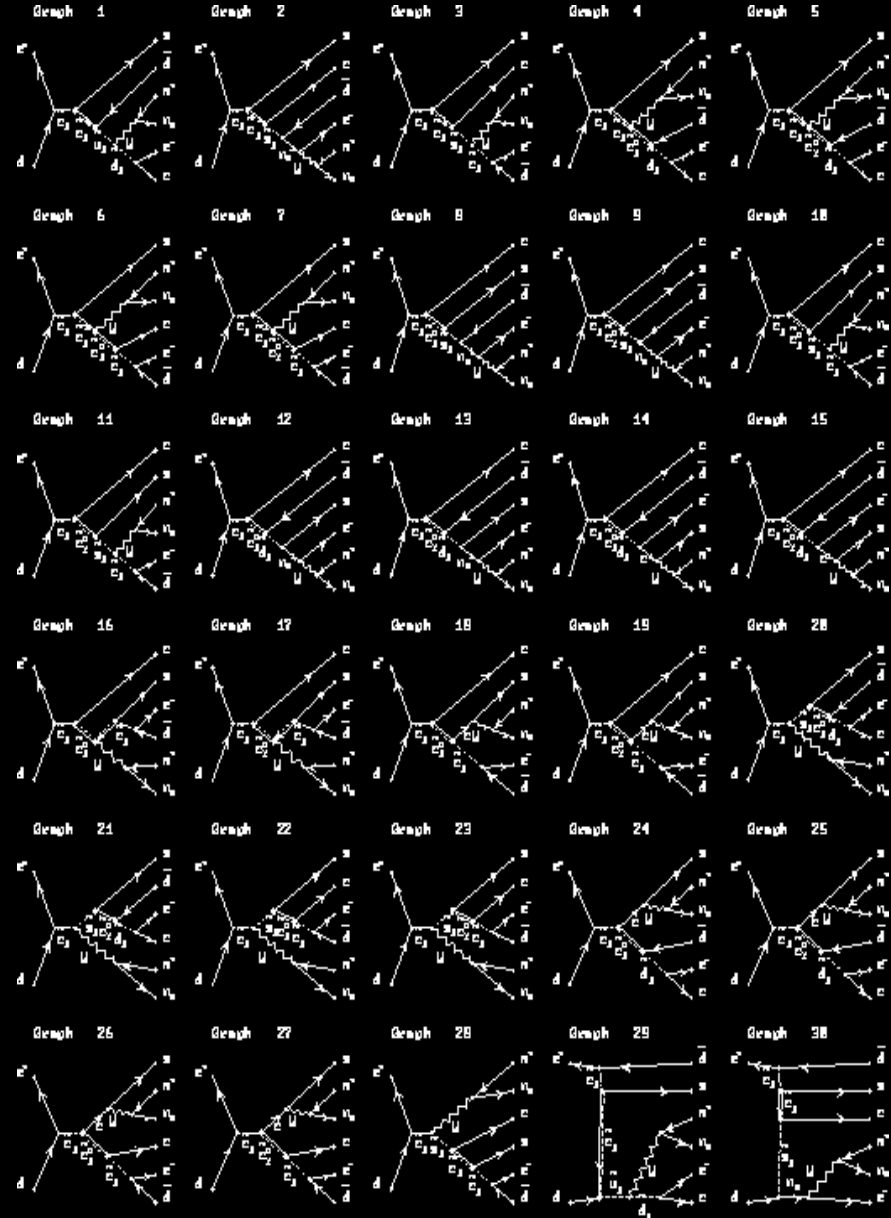

Because each turn  $\rightarrow +$  is a turn for  
 minus in reverse  $\leftarrow -$  except when it  
 changes, at a max or min of path.  
 But the  $\Pi$ , MAX + MIN is odd, hence  
 the sign changes.

If we start & stop going in same  
 direction, then  $R_{AB} = X_{BA}$  because the  
 no. of turns is even.

If there is an over lapping section  
 it's there is no contribution.

one opens both eyes, then one becomes  
crazy.”*

letter to Heisenberg,  
October 19, 1926

Wolfgang Pauli

“Dreams”

In the broad light of day mathematicians check their equations and their proofs, leaving no stone unturned in their search for rigour. But at night, under the full moon, they dream, they float among the stars and wonder at the mystery of the heavens: they are inspired. Without dreams there is no art, no mathematics, no life.
